

NovaTech Solutions — Information Security Policy

Version 2026

1. Password Security

Employees must use strong passwords and must not share passwords with other people. Company passwords should not be reused for personal accounts.

2. Multi-Factor Authentication

Multi-factor authentication is required for company email, cloud services, and other systems designated by the IT security team.

3. Device Security

Company laptops must use approved security software, automatic screen locking, and operating-system security updates.

4. Data Protection

Confidential company information must only be stored in approved company systems. Employees must not upload confidential information to unauthorized external services.

5. Security Incidents

Suspected phishing, malware, unauthorized access, or data loss must be reported to the IT security team immediately.
